

Apollo Salon Extraction System S1000

This is a totally new unit. It is designed as a salon based unit. It is approximately 185cm tall and the side panels are 75cm wide. This unit incorporates three fans so has a capacity of 1065m³ per hour. The central column is made of metal coated in black paint. The side panels are semi transparent green acrylic. It also includes a shaped black rubber mat. The top third of the unit has a built in storage cupboard for towels and solution etc.

APPLICATIONS

Salon based filtration unit for the removal and filtration of overspray generated in the application of Sunless Tanning solutions. When sunless tanning solution is sprayed through an airbrush or HVLP spray gun, a certain amount of the solution does not settle on the body, but floats around in the atmosphere. Some will be breathed in by both the client or therapist, some will settle on the

walls and furniture covering them in a brown stain. By using the Apollo Salon Mist extractor, this can be reduced to a minimum, making a cleaner healthier working environment.

Stand alone unit designed for Salon use. Comes complete with black mat for client to stand on
